Description

New multi-format digital vision mixer offer robust and reliable production switching at an affordable price, perfect for small studio, playout, venue and OB requirements. The KM-H2500 is a six-input two-key SD/HD-SDI model ideal for entry-level applications.

Main features

- The KM-H Series digital vision mixers fit perfectly with JVC's philosophy of providing an affordable upgrade path to high definition production, and are thus the ideal companion for systems incorporating GY-HD250 series multirole cameras and DT-V series HD monitoring solutions.

- Providing three re-clocked and independently-adjustable reference outputs, the mixers are also capable of generating their own reference for a small system.
- Digital mixers feature an intuitive, traditional panel layout and a simple menu structure, and are very easy to set-up and use.
- High quality chroma keying and sophisticated dual animation playout capability ensures that the KM-H switchers will satisfy the most demanding of applications, while the ability to work as both a standard and high definition switcher and to upscale SD inputs, ensures that the KM-H Series digital vision mixers offer a future-proof investment.

Additional features

- Tough metal single-piece construction for desk-top or optional in-desk/ rack-mount operation, high-end push buttons and a robust T-bar; all designed to handle the physical challenges of mobile and flight-case use.
- The high-quality buttons are user adjustable to any brightness and hue for easy reading in darkened environments, allowing the user to fully customise the appearance of their own unit.
