

## LATEST VIDEOS: Inside the JVC GY-HM700 ProHD camera

JVC's new shoulder-mounted camcorder, GY-HM700, is the industry's first camera to store files on inexpensive SDHC memory cards and optionally to SxS media compatible with Sony's XDCAM EX format.

Developed for mainstream production, electronic news and gathering cinematography, the GY-HM700 uniquely records the QuickTime file format used by Apple's Final Cut Pro, and the use of SDHC cards means it uses up to 20% less power than tape or HDD-based systems.

[Tim Dashwood](#), in conjunction with JVC, has created a series of informational videos to help guide you through the GY-HM700's key features and setup. Essential to those of you who don't have time to read the manual, *Inside the JVC GY-HM700 ProHD camera*, provides great tips and tricks, so you can get the most out of your new purchase.
