

Vandal protection quality from JVC

The vandal resistant, **V. NETWORKS** series, has been tested by JVC to ensure your security network can

withstand excessive force without affecting camera performance.

The **VN-V225VPU** camera which features True Day / Night Mech Filter, 1/3inch Progressive CCD Min., Illumination 0.1lx, Dual Streaming and VGA Resolution is so strong it can endure the force of a golf club. On average, the dome cover can bear the force of approximately 60 Newton, which is beyond the full swing of a driver which is roughly 42 Newton.

After the test is performed three times, the cameras are then checked for normal working operation and for visible cover damage. The **VN-V225VPU** and **X235VPU** cameras have been tested at the height of 1 metre and can endure a 5kg hammer over 50j. The **VN-V225U** and **X235U** cameras can withstand a 5kg hammer, over 15j at the height of 0.3 metres.

JVC's V. NETWORKS series provide the highest quality of surveillance and, with the added vandal resistant covers, you'll be sure that your camera will withstand the most challenging working conditions.
